**BRAEBON Announces New MediByte™
Snoring and Sleep Apnea Screener**

*Leading sleep laboratories recognize BRAEBON as
innovative supplier of state-of-the-art sleep products*

New York, November 1, 2006: BRAEBON Medical Corporation, a world leading designer, manufacturer, and distributor of Outcomes Core Management software and related sleep products, has released the all-new MediByte™ snoring and sleep apnea diagnostic screener for use by dentists, cardiologists, sleep laboratories and sleep professionals. “The new MediByte™ addresses the needs of today’s business environment of sleep” said Braebon’s Director of Sales Michael Clark. “We have patent-pending technology inside of this new recorder,” added company CTO Donald Bradley, “and it’s so simple to use we’ve actually had nine year olds successfully run it with zero training.”

For Release 9 a.m. EDT
Nov 1, 2006

The MediByte™ represents Braebon's new generation of feature-rich and simple-to-use sleep products which are designed For Today's Business of Sleep.™ "The MediByte™ is part of our overall vision and long-term strategy." said Braebon CEO Richard Bonato, Ph.D. "By offering quality titration monitors that are simple to use dentists now have a choice beyond paper and pencil questionnaires for oral appliance titration monitoring. Cardiologists can record 24-hour EKG with the MediByte™ in addition to other cardiopulmonary measurements. Sleep professionals now have more flexibility and choice and can extend their diagnostic arm into the community by screening for snoring, sleep apnea and PLMs in the comfort of the patient's home. They can even record for one night or two - the choice is entirely up to the sleep professional."

The MediByte™ kit comes with a complete array of sensors, electrodes, 10-channel recorder, carrying case, software, user guide, and laminated patient set-up guide. "If you can use a computer mouse, you can use the MediByte™ software. People are literally up and running and using this product in minutes. To say it's simple to use is truly understating just how much design, effort, testing, and development went into this product" said Michael Clark.
